Education

Youngstown State University — Youngstown, OH
Bachelor in Computer Science, Minor in Math — *August 2021 – December 2025*

Experience

Dev Youngstown (Software solutions company) — June 2024 – December 2025
Full-Stack Software Engineer — *Remote Youngstown, OH*

- Designed and implemented RESTful APIs (FastAPI) and databases to support MVP applications used by clients for data-driven decision making.
- Developed responsive frontend interfaces using React, TypeScript, and Material UI with reusable components and consistent design patterns.
- Built a React Trivia Game scene featuring component-based UI, game state logic, and user interaction flows.

Youngstown State University — June 2024 – September 2025
Student Software Engineer — *Youngstown, OH*

- Updated and maintained university web pages using HTML, CSS, and JavaScript (Drupal), focusing on accessibility, responsiveness, and consistency with UX standards.
- Resolved UI issues and content bugs with quick turnaround, collaborating with non-technical clients to understand requirements.

Undergraduate University Research

Youngstown State University — August 2024 – May 2025
Undergraduate D.S. Researcher — *Youngstown, OH*

- Prototyped the integration of an Ollama Mistral AI model with a React/FastAPI application to experiment with AI-assisted customer review analysis.
- Partnered with TravelCenters of America to align research findings with business objectives, presenting findings and project updates to technical and non-technical stakeholders.

Projects

Habit Tracker | *FastAPI, React (TypeScript), Clerk, SQLite, Antrhopic API* — GitHub Link

- Built a full-stack habit tracking app with a React frontend and Python FastAPI backend, featuring JWT authentication and a SQLite database via SQLAlchemy.
- Integrated the Anthropic Claude API to generate personalized coaching based on users' daily journal entries and mood ratings, with context-aware prompts tailored to each check-in.
- Implemented a streak tracking algorithm with proper handling of date gaps and consecutive-day logic to calculate current and longest streaks.

Patchy | *React, Python, Discord.py, Oracle Cloud Infrastructure, Ubuntu* — GitHub Link

- Designed and deployed a Discord bot used by 220+ users that automatically tracks Riot Games' Valorant patch notes and posts to a designated discord server in real-time.
- Engineered a responsive React + Tailwind landing page featuring onboarding flows, product previews, and Discord OAuth integration.
- Implemented web scraping and change-detection logic to identify new patches and avoid duplicate or redundant notifications.

Technical Skills

Languages: Python, TypeScript/JavaScript, MySQL, HTML/CSS
Frameworks: FastAPI, Flask, Express
Developer Tools: Node.js, Vite, Git/GitHub, Docker, VS Code, Xcode, pgAdmin 4
Libraries: React, ReactNative, BeautifulSoup, Selenium, Pandas
